Goodbye Cables!

Wireless charging, also known as inductive charging, is a technological advancement that has revolutionized the way electronic devices are powered.

Instead of relying on traditional plug-in chargers, wireless charging utilizes electromagnetic fields to transfer power from a charger pad or station to the device being charged.

Did you Know?

Wireless Charging has been around since 1820!

In 1820, using an electric current and a magnetic compass, Danish physicist Hans Christian Oersted originally discovered that electric currents can create a magnetic field. But the history of wireless charging doesn't stop there! A decade later, Michael Faraday, an English scientist discovered electromagnetic inductive wireless charging!

An Italian Heart

Precision design, meticulous engineering, constant research and testing, selection of the best materials. In short: a love for beautiful objects and care for the environment. This is what an Italian-made product means for Maxema.

More than just a pen

Those who know us are well aware that our pens are much more than just plastic. We have been working in Italy for two generations alongside people we trust and with whom we love to design top quality writing implements. Each Maxema pen is created from the desire to take care of the environment and our customers, with safe, reliable and durable materials. Our mission? To support your projects and help you, wherever you may be in the world, to tell your story and leave a lasting message.

Imprint your brand

Once assembled, the pen is ready to be “dressed” with a brand or message, choosing the most suitable combinations between finishes, colors and printing techniques. At the end of the process, the pen is finally ready to bring its precious message: your image.

Maxema Antibacterial: design and safety

Take care of yourself even when you write: the plastic we use on our Antibacterial collection prevents bacteria from settling on pen surfaces and passing from one hand to the other.

Why choose Maxema Antibacterial Pen?

The plastic used is antibacterial

Certified antimicrobial additive releases silver ions and prevents bacteria from settling on the surfaces of the pen.

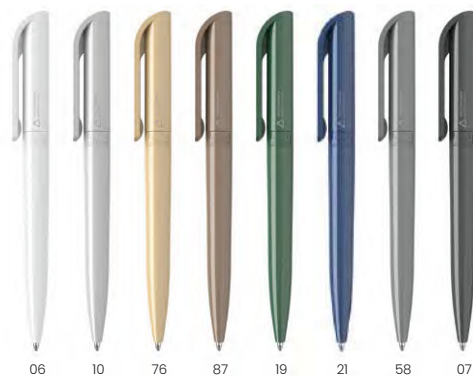

Bacteria: up to 99,99% less

Laboratory tests have shown that up to 99,99% of the bacteria on the pen are destroyed.

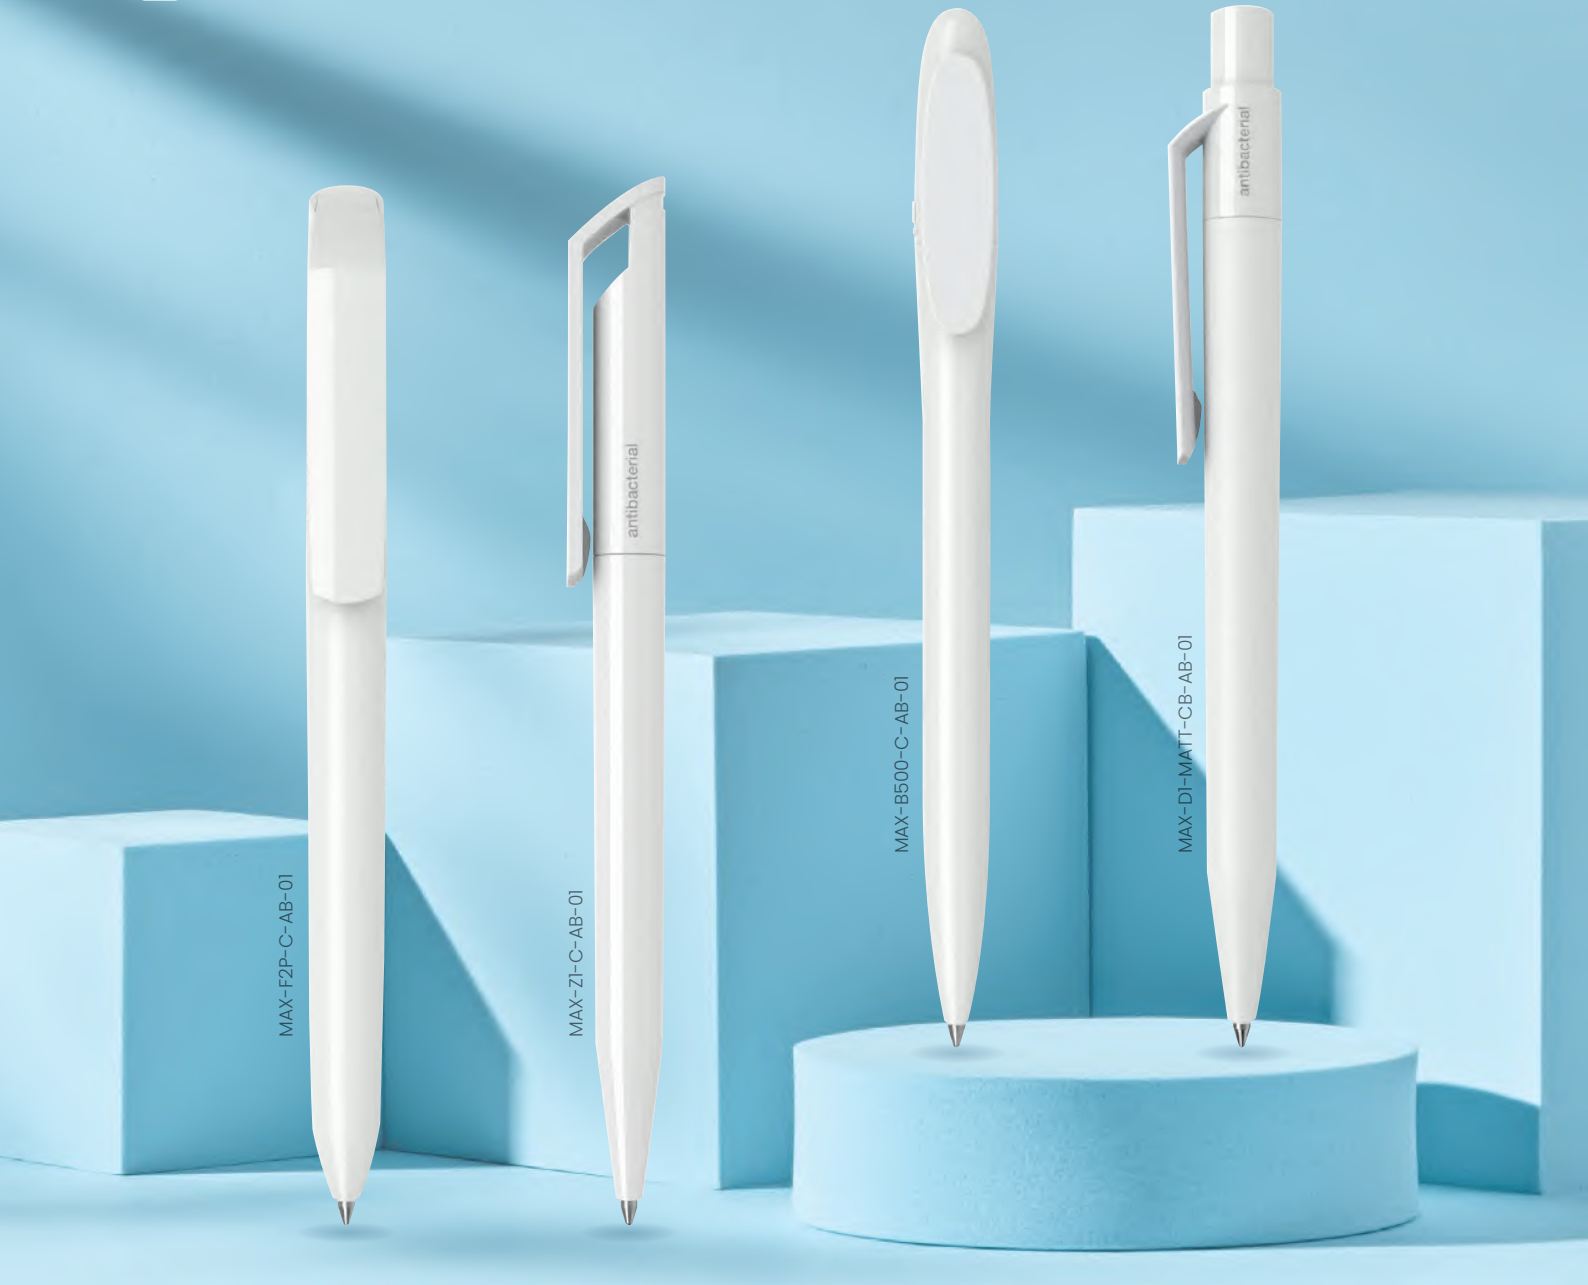

We Care about your health

Some bacteria can cause disease and infections: make your life still safer, even when you write.

Promotional Lanyards and Reel Badges

Lanyard have become a ubiquitous accessory in many different environments, and they offer numerous benefits to their wearers.

Custom Made Eco-Friendly Lanyards

Recycled plastic bottles made into finely weaved yarn for lanyards

RPET stands for recycled polyethylene terephthalate, or recycled PET. PET is a strong, durable and recyclable material that is used for soda bottles, water bottles and food jars, while RPET can be made into such products as blankets, insulation, car parts, shoes and more. RPET is produced by collecting, sorting and recycling PET, then refining the material into flakes that can be turned into new products. Using RPET as an alternative to PVC is a huge step forward on the path toward a greener, safer and cleaner future.
